HISTORY OF SOLID FABRIC

The history of solid fabric dates back to prehistoric times when people used animal hides and vegetation for protection. The first woven textiles were made from felt and date back about 100,000 years.

Textiles have been an integral part of human daily life for thousands of years, with the first use of textiles, most likely felt, dates back to the late Stone Age, roughly 100,000 years ago. However, the earliest instances of cotton, silk and linen begin to appear around 5,000 BC in India, Egypt and China.

In the context of textiles, the term "solid" refers to a type of fabric that has a uniform color or pattern without any visible designs, textures, or variations. It is the simplest and most basic category of fabric design, characterized by its consistency in color and lack of patterns or motifs.
